

COMMENTS

STYLE

3 →

The interface lacks comments. Otherwise, the comments look good. Other file comments accurately describe the function of the methods and the return value.

It is important to have the comments in the interface as well so that others that may view it know the purpose of each method.

4 → Consistent indentation and accurate variable names in the methods.

BOATY

Review of: Green Tomatoes

ROBUSTNESS

- 2 → Code does not run.
- Mixed generic typing between D and Cards. Main method lacks proper parentheses.
- Missing semicolon.

README

- 4 → The description is nice and thorough. It is also clear as to why you chose the architecture (LList) for your Deque implementation and the steps taken to do so.
